
Oil Water Separator

Oil/Water Separation for Cleaner Condensate Discharge

Van Air Systems' Oil Water Separator series is a cost effective solution to remove common lubricating oils from condensate streams. This heavy duty unit is designed to simultaneously process different types of oils. These oil water separators are ready for 24 hour continuous operation. Van Air Systems' oil water separators can remove lubricants down to a level in compliance with most regulations, and are designed to operate in most ambient conditions year-round.

These Oil Water Separators utilize multi-stage separation technology to clean up condensate streams to stay in compliance. The first stage collects and prevents rust, dirt, and scale from entering the main reservoir. The main reservoir provides time to allow oil to coagulate and float to the surface. The next chamber removes the segment of oils that are still in the solution. Finally the the last stage is where the carbon beds ensure that condensate will meet or exceed discharge limits.

F E A T U R E S

No Electricity Required

Low Maintenance Costs

Multi-stage Separations

Made in U.S.A

BENEFITS OF OIL WATER SEPARATORS

Simple // Dependable // Inexpensive

SPECIFICATIONS

- Inlet Diffuser
- Multiple Inlets
- Removable access lid
- Translucent oil container
- Flow indicator
- Sample & reference jars
